Jill

Please find attached stock solution and extract stability results for the plasma MDA validation study.

The stability data for extracted QC samples stored refrigerated for 1 day before analysis did not meet the acceptance criteria. Therefore extracted samples will have to be injected promptly after extraction - as was performed during the validation study.

Best wishes

Phillip

See attached. Still need further info on stability. Jill

Jill--The MDA data are acceptable except for the processed sample stability and stock solution stability. I thought an earlier email indicated that further stability data were forthcoming, but I don't think I've received any. All that stands in the way of authorization to run specimens right now is some further info on stability, either written or conveyed to me by telephone. . . --Robin
